

OxySense

GEN III OxyOTR™

The Solution For Your Laboratory Oxygen Measurement Requirements

Cost-Effective Permeation System for Films, Bottles and Packages

The OxyOTR™ System offers accurate and timely oxygen transmission rate (OTR) testing for films, bottles and finished packages at a price well below that of dedicated permeation systems available in the market today.

It is the ideal solution for labs wanting to expand their OTR and oxygen measurement capabilities and capacity without breaking the budget.

With the OxyOTR™ System users are able to conduct an unlimited number of permeation test on films, bottles and finished packages, simultaneously. And now, for the first time, you can even test “live” (filled with real product on real lines) packages.

And with the emphasis on improvements in package cost/performance, this new resource can be your solution!

Features

- Real time data—graphs and logs
- Integrated report writer
- SampleTracket™ sample management software
- Touch screen operation (on OxySense 5000)
- Easy to operate

Benefits

- **Unlimited simultaneous test of films and packages**
- **No annual maintenance or calibration**
- **“Live” package testing**
- **Also does headspace and dissolved O₂ testing**
- **Travels well, even to customer site**
- **High performance/low cost**

OxySense GEN III OxyOTR™

The Solution

for labs interested in increasing and expanding their permeation capabilities,

and

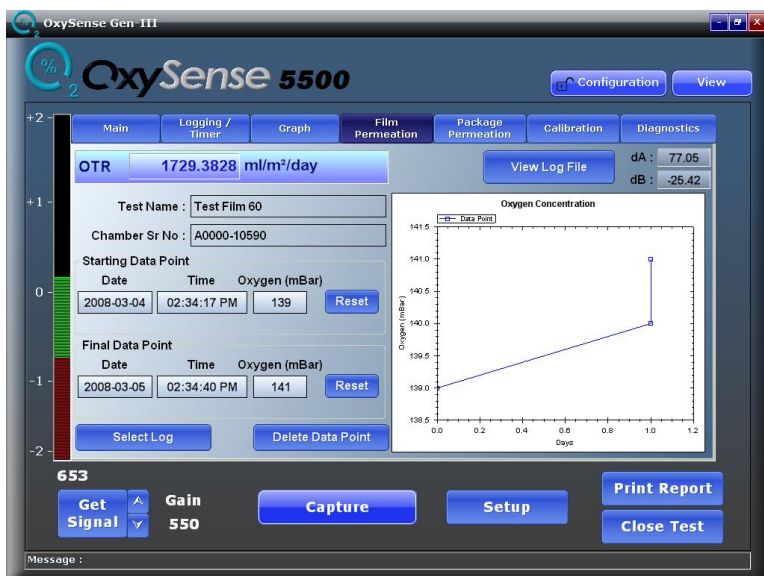

companies interested in “bringing in house” permeation testing.

Applications

- **Packaging**
 - Package material and design evaluation
 - Closure Design and Evaluation
 - Quality Control and Assurance
 - Research and Development
 - Competitive analysis
