

- **Successful start of the project “Generators for fire trucks”**

The lights are green! In a co-operation with our partner Farymann America and C.E. Niehoff & Co., the project “Generators for Fire Service Vehicles” was successfully initiated in May 2008. Following an intensive planning and development phase, the first vehicles have been equipped with our 43F engine and are performing well in the field.

Many pieces of equipment used by the fire service today are powered electrically. One needs only to think of all the rescue equipment (such as spreaders or cutters; suction equipment, and even the spotlights used for illumination) to realize that response to an emergency cannot be handled effectively without portable electricity.

The successful and cost-effective completion of national and international projects is ensured by the corresponding wealth of experience of our employees in project business. The results achieved in this project will therefore be developed further, in the course of subsequent projects with OEM's, into marketable series-production products. The demand for stationary and mobile generators is also bound to increase due to the increasing worldwide energy requirements. We also anticipate further growth from the development of business in tailor-made customer solutions and intensification of our complete after-sales activities. In addition to the confidence in our technical expertise, on the basis of successful partnerships is thorough and comprehensive customer service. We are making every effort to continually improve the service level for our customers, because customer satisfaction is the highest measure of our success.

The long-established relationship with our customers is one of our most important success factors. Our customers greatly appreciate our flexibility and excellent customer service.
