Ad5-CMV-p38beta DN

Catalog number: JMAAd-43
Quantity: 0.5 ml

Gene: p38beta DN

Vector Construction: Dominant negative AGF mutation in human p38beta MAPK with 5' flag epitope was cloned into the multiple cloning site of pAC-CMV-pLpA. The resulting plasmid was cotransfected into HEK293 cells with plasmid pJM17 which contains the Ad5 genome. Homologous recombination between the two plasmids resulted in the replacement of the Ad5 early region 1 with the human p38beta MAPK expression cassette, generating a replication deficient recombinant virus.

Epitope tag: Flag
QC testing: Western Blot (to block endogenous p38 phos)
Titer: Approx 1E8/ml
Supplied As: Crude HEK293 cell lysate.
Storage: Store at -80°C. Multiple freeze/thaw cycles not recommended.
Price: \$450
