Ad5-CMV-JNK2 DN (APF mutation)

Catalog number: JMAAd-52
Quantity: 0.5 ml
Gene: JNK2 dominant negative (APF mutation).

Vector Construction: Human cDNA for C-Jun-N-Terminal kinase 2 with a dominant negative mutation (APF) with 5' HA epitope was cloned into the multiple cloning site of pAC-CMV-pLpA. The resulting plasmid was cotransfected into HEK293 cells with plasmid pJM17 which contains the Ad5 genome. Homologous recombination between the two plasmids resulted in the replacement of the Ad5 early region 1 with the JNK2 DN human cDNA expression cassette, generating a replication deficient recombinant virus.

Epitope tag: HA
QC testing: Western Blot
Titer: Approx 1E8/ml
Supplied As: Crude HEK293 cell lysate.
Storage: Store at -80°C. Multiple freeze/thaw cycles not recommended.
Price: \$450
