Three additional non-skid steps beneath rear ladder simplify access to the rear of the trailer

Minimizer fenders to further protect the underside of the trailer from debris

Air-adjusted pintle hook with frame reinforcement, rear gladhands with a built-in shut-off valve and dummy coupling to keep free of debris and 7-way plug

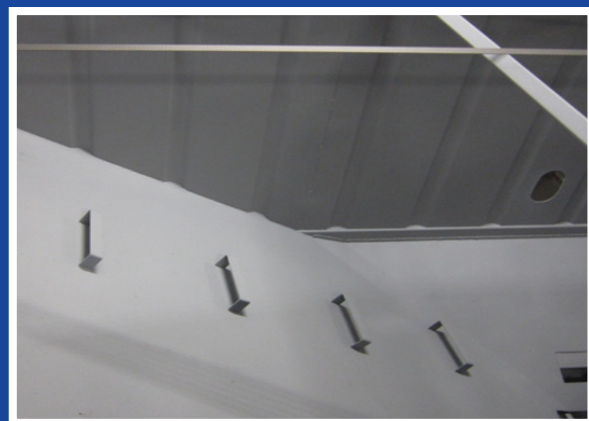

Quality Matters at Bourbon

At Bourbon we pride ourselves on building the finest quality trailers for the industry. Through research and field trials, it was found a larger top rail adds rigidity and prevents the trailer from twisting and flexing upon entering and exiting fields, reducing weld stress.

All trailers are sandblasted to provide best possible paint adhesion

All trailers are sandblasted prior to painting, providing the ideal surface for paint adhesion. Next, a marine quality epoxy primer is applied to ensure corrosion resistance. Then a high solids urethane top coat is applied to the exterior and the under belly of the trailer to further protect from seasonal wear and tear.

Steps inside of the hopper ensure improved safety

Easy flow hopper with no 90 degree corners to eliminate grain hang-up in corner welds

Bourbon Trailers

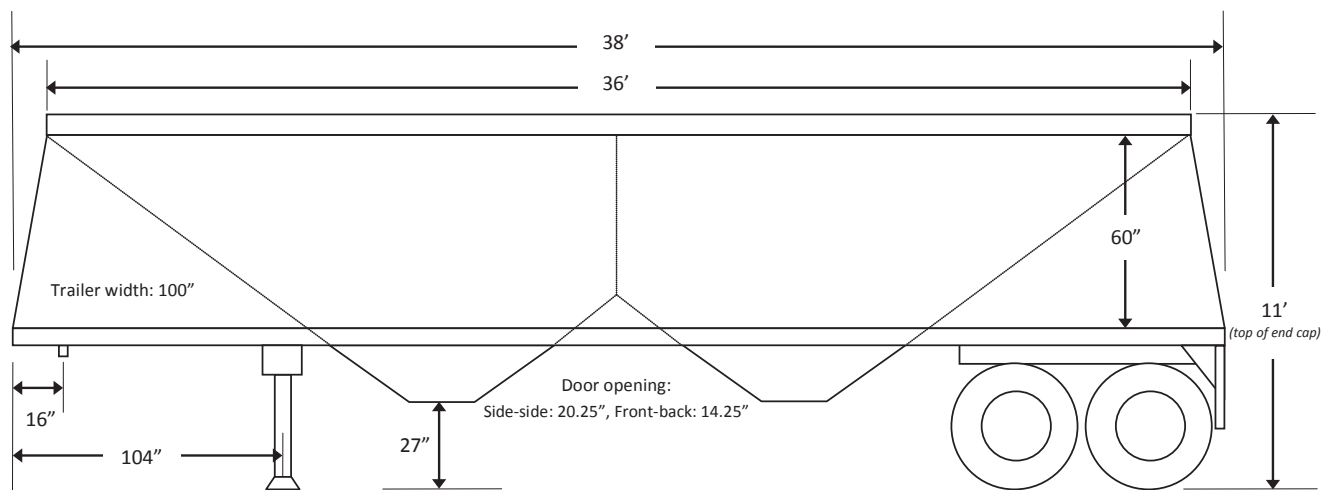

Each trailer is manufactured with Bourbon's standard features and we provide our customers with the ability to upgrade their units with a wide variety of optional equipment.
