What Happens During a Female Orgasm... Who gets it?

Things Men Think Are Pretty Romantic

- Complimenting him or her. ...
- Switching up sex.

What Happens During a Female Orgasm... Who gets it?

dd.

ee.

Once a woman becomes sexually aroused, her heart begins to beat quicker, and she breathes faster. She'll tighten various muscles all over her body. Her breasts will enlarge slightly, and her nipples will become erect. Some women's faces, necks, or chests will become flushed. Also, her clitoris enlarges.

- ff. She'll notice that her vagina will have created a natural lubricant that will make sex much more enjoyable (if you're too dry, then sex can really hurt).
- gg. Her labia (lips) will flatten out and open up. Inside, her vagina will lengthen and widen (preparing for you know what). All this happens because blood rushes to the pelvic area — called engorgement — and creates a pleasurable warm sensation in that area (you know what I'm talking about).
- hh. As arousal continues, everything becomes even more enlarged, and all the changes mentioned above become more pronounced.

Yet the woman's clitoris actually retracts under the hood and gets 50 percent shorter right before she climaxes.

ii.

jj. When the woman reaches orgasm, her skin will flush, and muscles all over her body will continue to contract. Blood pressure, heart rate, and breathing rates will continue to rise.

kk.

ll. In the vagina itself, she'll feel rhythmic contractions in the outer part of the vagina, in her uterus, and in her anus. These intense

pulses happen about once every second. **Mild orgasms have three to five pulses, and intense orgasms have 10 to 15.**

mm.

nn.

*** Women who are more confident are more likely to reach the heady heights of orgasm!!!!**
