* Factory Direct Pricing means X-Stream is selling to you, the end user, at prices at or near traditional Distributor Pricing. The end user is responsible for providing the labor for any warranty repairs, general repairs and preventative maintenance. Structural issues will always be handled X-Stream. Since X-Stream has No Custom Parts with a Super Simplistic Design, owner operators easily perform the necessary repairs and maintenance with minimal mechanical ability. If you have been in this business longer than 5 minutes, you have often experienced the problems of HAVING to deal with other manufacturers' Distributors, especially in regards to wait times for service, expensive travel/ hourly rates and expensive 'custom' parts. Also, you are often encouraged or required to purchase on-going (forever) maintenance contracts on competitive models. X-Stream has eliminated this need to use a Distributor. Therefore, the short-term and long-term costs of ownership with an X-Stream are *SUBSTANTIALLY LOWER* than with competitive models.
