DETAILED COURSE DESCRIPTION:

This confined space entry program is an industry training program for most common hazards that exist for on-site service providers, O&M professionals, installers and plumbing workers. This 4-hour training is industry specific and focuses on awareness, training, hazard recognition and mitigation of related work activities that involve confined spaces and places they work. Examples include septic/pump tank repair, new tank installation/repair of pump/electrical components, sewer and other utility work along with commercial applications of various tanks, pits and vaults.

Instructor: Roxanne L. Groover 4(B), John Thomas 4(B)
